

# Tinted Windows and Their Benefits

Suppose you have a car, but the sun's extreme heat is not letting you drive comfortably. What to do? One of the window glasses of your house might get damaged due to any reason, what will you do? You can quickly get a [tint for the window](#) for your expensive car or your house.

- **What is window tinting?**

Window tint or window film is a delicate laminated sheet applied directly to the inside or outside of the glass in your house. It can also to the interior glass of your car. There are different kinds of window films available for your vehicle and sweet home. Some are metallic tinting, ceramic tinting, carbon tinting, dyed tinting, etc.

- **The Process of Applying Window Tint**

First, a piece of film by measuring your window size is cut. Then a solution is sprinkled on that piece of sheet and your window. The next step involves putting the sheet on that glass of the window, and then the application solution is pressed from the film and the glass. To confirm the fitting of the film, the edge of the sheet is cut.
